

Emulator

The following functions are contained in the `twinlab.Emulator` class.

Constructor

<code>Emulator</code> (<code>id</code>)	A trainable twinLab emulator.
---	-------------------------------

Setting-up

<code>Emulator.design</code> (<code>priors</code> , <code>num_points</code> [, ...])	Generate an initial design space for an emulator.
---	---

Train

<code>Emulator.train</code> (<code>dataset</code> , <code>inputs</code> , <code>outputs</code> [, ...])	Train an emulator on the twinLab cloud.
--	---

<code>Emulator.status</code> (<code>process_id</code> [, <code>verbose</code>])	Check the status of a training process on the twinLab cloud.
---	--

<code>Emulator.view</code> ([<code>verbose</code>])	View an emulator that exists on the twinLab cloud.
---	--

<code>Emulator.view_train_data</code> ([<code>verbose</code>])	View training data with which the emulator was trained in the twinLab cloud.
--	--

<code>Emulator.view_test_data</code> ([<code>verbose</code>])	View test data on which the emulator was tested in the twinLab cloud.
---	---

Explore

<code>Emulator.summarise</code> ([<code>verbose</code>])	Get a summary of a trained emulator on the twinLab cloud.
--	---

[Skip to main content](#)

<code>Emulator.score</code> ([params, verbose])	Score the performance of a trained emulator.
<code>Emulator.benchmark</code> ([params, verbose])	Benchmark the performance of a trained emulator with a calibration curve.

Predict

<code>Emulator.predict</code> (df[, params, wait, verbose])	Make predictions using a trained emulator that exists on the twinLab cloud.
<code>Emulator.sample</code> (df, num_samples[, params, ...])	Draw samples from a trained emulator that exists on the twinLab cloud.

Plot

<code>Emulator.plot</code> (x_axis, y_axis[, x_fixed, ...])	Plot the predictions from an emulator across a single dimension with one and two standard deviation bands.
<code>Emulator.heatmap</code> (x1_axis, x2_axis, y_axis[, ...])	Plot a heatmap of the predictions from an emulator across two dimensions.

Improve

<code>Emulator.recommend</code> (num_points, acq_func[, ...])	Draw new recommended data points from a trained emulator that exists on the twinLab cloud.
<code>Emulator.learn</code> (dataset, inputs, outputs, ...)	Perform active learning to improve an emulator on the twinLab cloud.
<code>Emulator.calibrate</code> (df_obs, df_std[, params, ...])	Solve an inverse problem using a trained emulator on the twinLab cloud.

Delete

<code>Emulator.delete</code> ([verbose])	Delete emulator from the twinLab cloud
