

twinlab.load_example_dataset

twinlab.load_example_dataset(*dataset_id*, *verbose=False*)

Load an example dataset from the twinLab cloud into the current session.

Parameters:

- **dataset_id** ([str](#)) – The name of the dataset to load.
- **verbose** ([bool](#), *optional*) – Display information about the operation while running.

Returns:

The example dataset.

Return type:

[pandas.DataFrame](#)

Example

```
tl.load_example_dataset("quickstart")
```

	x	y
0	0.696469	-0.817374
1	0.286139	0.887656
2	0.226851	0.921553
3	0.551315	-0.326334
4	0.719469	-0.832518
5	0.423106	0.400669
6	0.980764	-0.164966
7	0.684830	-0.960764
8	0.480932	0.340115
9	0.392118	0.845795
